Corresponding author. Andrew H. Bond, andrew.bond@sjsu.edu

Declarations.

Funding. No funding was received for this work.

Competing interests. The author declares no competing interests.

Data and code availability. Every number in Sections 7.2, 7.5, and 7.6 is read from a sealed record in a public repository. The registrations, run logs, graders, and result files are at <https://github.com/ahb-sjsu/geometric-evaluation-theory> and <https://github.com/ahb-sjsu/observation-theory-campaigns>. The specifications and the checker described in Section 7.6 are at <https://github.com/ahb-sjsu/philosophy-engineering>. The source of this manuscript is at <https://github.com/ahb-sjsu/discovery-philosophy-engineering>.

Use of generative artificial intelligence. The author used a large language model assistant for source preparation, for the prior-art search reported in Section 2, for drafting Sections 7.5 and 7.6 from the sealed campaign records, and for editing. All claims, verdicts, and numbers were checked against the records cited in each section. The author is responsible for the content.
